WAVE Browser Extensions

The WAVE Chrome and Firefox extensions allows you to evaluate web content for accessibility issues **directly within Chrome and Firefox browsers**. Because the extension runs entirely within your web browser, **no information is sent to the WAVE server**. This ensures 100% **private and secure accessibility reporting**. The extension can check intranet, password-protected, dynamically generated, or sensitive web pages. Also, because the WAVE extension evaluates the rendered version of your page, **locally displayed styles** and **dynamically-generated content from scripts or AJAX** can be evaluated.
